

Workforce Income Analysis using SQL

01

Introduction

Introduction

- This Project is a case study which analyses Salary and Remote Work Trends Across Job Titles and Company Locations.
- The dataset has 13,972 workforce records from the year 2020 to 2024.
- The dataset features data like job title, experience level, salary, company size, location, remote ratio.
- A csv file was imported into the SQL server and analysis was done using SQL Server.
- The main goal of this analysis is to provide insights for hiring, salary benchmarking, and workforce planning.

Objective

Objective

Business Insights & Strategy

Benchmark salaries by role, level & location

Spot fast-growing markets & industries

Retain talent with competitive pay

Shape remote work policies effectively

Talent Acquisition & Planning

Target high-paying & remote-friendly regions

Hire based on demand for experience levels

Detect skill shortages

Objective

Market & Competitiveness

Predict salary trends & track growth roles

Benchmark pay & flexibility with competitors

Geography & Remote Work

Analyze remote adoption across regions

Find locations with strong talent pools

HR & Career Pathing

Add performance-based incentives

Create training for high-growth roles

Guide employees toward better-paying domains

Methodology

Data collection & Import:

Dataset of ~14,000 records imported from CSV into SQL Server.

SQL Analysis:

Applied aggregate functions, joins, and subqueries to analyze salaries, experience levels, and remote work trends.

Designed queries to address tasks like salary benchmarking, growth tracking, and workforce distribution.

Insight Extraction :

Summarized query outputs into meaningful findings by role, geography, and company size.

04

Key Findings

Key Findings

- Majority of employees worked in **large companies (124)** vs medium (52) & small (42).
- **Full-time roles dominate**, with select job titles showing higher part-time presence.
- **US,IN,DE,CA and GB** host the largest concentration of **large companies**.
- **Remote work adoption** declined sharply from **2021 → 2024** across all experience levels.

Key Findings

- **Data Scientists** who worked as **PT** in the year **2023** has highest avg. salary at **\$95,650**.
- Mid-level salaries in Countries like **SA, AU, CA, QA, US, TN** are above global average in the year **2023**.
- Senior-level salaries show sharp variation, ranging from the highest in **IL(\$266K)** and lowest in **TR(\$18K)**
- Nearly **75% of remote employees** earn **>\$100K**.

Key Findings

- Strong salary growth was found in the year 2023-2024 where **MI (+11.6%) & EN (+8.4%) EX (+4.8%) & SE(+2.0%)**
- Countries like **DE, CA, IT** show **sustained salary increases (2020–2023)**.
- Internal role changes within the same level often yield **substantial salary boosts**

05

**Actionable
Insights**

Actionable Insights

- Expand **remote roles** as almost 75% of fully remote staff earn >\$100K.
- Use **geo-based pay bands** as SE salaries range from IL \$266K → TR \$18K.
- Target hiring in **premium mid-level markets** like QA, AU, TN, SA, US, CA.
- Align recruiting with **enterprise hubs** like US, IN, DE, CA, GB.
- Adjust office & hybrid policies because fully remote showed a rapid fall from **2021→2024**

Actionable Insights

- Prioritize **mid-level pipelines** (+11.6% avg. growth 2023→24)..
- Invest in **entry-level sourcing** in high-ROI markets like MX, SE, US.
- Build **structured promotions** as entry & mid-levels grow fastest.
- Retain staff by offering them **role-switch options** with higher avg. salaries.

Actionable Insights

- Encourage **internal mobility** – e.g., EN Data Analyst → Applied Scientist (+~\$79K)
- Upskill toward **high-growth roles** such as ML Engineer, Data Science Consultant.
- Explore **emerging talent hubs** like DE, CA, IT with sustained salary growth.
- Managers have to look beyond US for remote hires, but note market scarcity.

06

Insights

Insights

- Workforce is concentrated in **large enterprises especially** US, IN, DE, CA, GB.
- **Full-time roles dominate**, though part-time remains relevant in select titles.
- **Mid-level employees** are the backbone — strong salaries and fastest growth.
- **Enterprise hubs** continue to shape global hiring patterns.

Insights

- There are strong **geographic pay gaps**: IL (\$266K) vs TR (\$18K) for SE roles.
- **Mid-level salaries** above global avg in QA, AU, TN, SA, US, CA.
- **Role-switching boosts pay** — e.g., EN Data Analyst → Applied Scientist (+\$79K)
- Sustained multi-year growth in **DE, CA, IT** signals long-term market strength.

Insights

- Nearly **75% of fully remote employees** earn >\$100K marking a higher pay.
- **A Decline in remote adoption was seen** across all levels from 2021 →24
- **Entry & Mid-level roles** show the steepest salary growth in 2023→24.
- High-growth career paths include **ML Engineer** and **Data Science Consultant**.

07

Conclusion

Conclusion

- Workforce analysis shows **strong salary growth**, especially for entry & mid-level roles
- Large companies and key countries like **US, IN, DE, CA, GB** dominate employment trends.
- **Geographic pay gaps** are significant therefore regional benchmarking is essential.
- **Remote work offers premium pay**, though adoption has declined since 2021.
- **Career mobility and role-switching** unlock major salary boosts and long-term retention.
- Organizations that balance **remote flexibility, regional pay equity, and structured career growth** will stay ahead in attracting and retaining top talent.

Thank You!
